# SMPP Example Session

## Client

## Server

**Open connection** →

← 220 cage3 v8.06 SNPP server ready at Fri Sep 24 08:57:57 2004

**login** →

(Password provided by Critico) ← 250 Login Accepted

**page** (6 Digit pager no.) →

← 250 Pager ID Accepted

**mess test message** →

← 250 Message ok

**send** →

← 250 Message sent successfully

**quit** →

← 221 OK, goodbye

P1C support the entire level 1 command set ie. LOGI, MESS, PAGE, SEND, QUIT, HELP, and RESE.

LOGI is used to supply P1C with a six-character access password MESS is used to pass the message

HELP displays the command set available.

RESE resets the current session.

SEND and QUIT are self-explanatory.

The numeric 2** numbers indicate successful server responses.
